

# METROPOLITAN DISTRICTS

## INTRODUCTION

In giving the population of cities and incorporated towns and villages the Census must necessarily deal with political units, or with the population contained within the legally established limits of the city or town. In other words, the population of the city as a political unit with a definite corporate name can not properly or legitimately be anything more or less than the population within the corporate limits of the city. Any departure from this principle would lead to endless confusion.

## CITIES AND THEIR SUBURBS

It is a familiar fact, however, that the population of the corporate city frequently gives a very inadequate idea of the population massed in and around that city, constituting the "greater" city, as it is sometimes called; and that as regards large cities in few cases do the boundaries of the city, limit the urban population which that city represents or of which it is the center. The suburbs are from many standpoints as much a part of the city as the area which is under the municipal government. The suburban residents share in the economic and social activities of the city; many of them have their business or employment in the city; and to a less extent persons residing in the city are employed in the suburbs. If we are to have a correct picture of the massing or concentration of population in extensive urban areas, and of the size and relative importance of the aggregations of urban population in different parts of the country, it is necessary to establish metropolitan districts which will show the magnitude of each of the principal population centers taken as a whole, by including in a single total both the population of the central city itself and that of the suburbs or urbanized areas surrounding it—or, in some cases, the population of two or more cities which are located in close proximity and that of their suburbs.

## METHOD OF DEFINING METROPOLITAN DISTRICTS<sup>1</sup>

The metropolitan districts for the census of 1930, as here presented, include, in addition to the central city or cities, all adjacent and contiguous civil divisions

having a density of not less than 150 inhabitants per square mile, and also, as a rule, those civil divisions of less density that are *directly* contiguous to the central

only beyond existing city boundaries, but beyond the boundaries of any area which might be annexed. Because of this there are students of the subject who incline to oppose further annexation except in the cases of obviously misfit or irregular boundaries and to favor the creation of a new unit, the metropolitan region, which will have charge of certain common public services—such as main highways, water supply and sewage disposal, park systems, police and fire protection, etc., leaving to the municipalities within the region autonomy as to their individual concerns.

"A clear definition of such metropolitan regions, capable of application to all situations, is still to be worked out. There are, however, certain considerations that should be borne in mind when drawing the boundaries of a metropolitan region, i. e., it is an area within which the conditions of manufacturing, trade, transportation, labor and living, in brief the daily economic and social life, are predominantly influenced by the central city. (Obviously there are regions in which there are two or even more cities of approximately equal influence.)"

Carrying out this idea, the civic development department of the United States Chamber of Commerce, with the approval of the Bureau of the Census, sent out a circular letter to the chambers of commerce of cities of over 50,000 population, inviting them to supply maps and data defining a metropolitan district as determined by certain proposed tests or control factors. These factors included telephone service, electric power service, retail store delivery, commuting service, water service, gas service, newspaper delivery service, mail delivery, switching limits, sewer service, residential membership in social and athletic clubs, operation of local real estate companies, and soliciting and collecting routes. A subsequent study of the extent of these various factors, their relations one to the other, and the general interpretation made of these by local organizations, made it evident that there was more or less inconsistency and that if the metropolitan districts were to be made uniform and comparable one with another, some factor should be used which could be applied uniformly and consistently to every city.

The method adopted by the Census Bureau changed the metropolitan district population by less than 5 per cent for approximately three-fourths of the cities for which metropolitan areas had been delineated by the local chambers of commerce. For a few of the cities (11) the change was over 10 per cent; and in such cases it seemed apparent that the local organizations were thinking of an industrial or trade area rather than of an area which represented the concentration of population around the large central cities. A study of the various factors and the population involved clearly indicates that the densely populated areas in the United States do not necessarily conform to what might be regarded as the trade area or the industrial area. In connection with the Census of Manufactures, however, major industrial areas have been established by the Census Bureau, and statistics of manufactures, by industries, have been compiled for these areas. As it was not found practicable to compile manufactures data by minor civil divisions, the county had to be used as the unit.

<sup>1</sup> A committee appointed by the industrial bureaus of the chambers of commerce which met in Washington in 1926, made a special report in 1927 on the defining of metropolitan regions. Their findings briefly were as follows:

"The real city to-day, because of the automobile, the telephone, and other distance diminishing agencies, extends not

cities, or are entirely or nearly surrounded by minor civil divisions that have the required density. This is essentially the same principle as was applied in determining the metropolitan districts for cities of over 200,000 inhabitants at the censuses of 1910 and 1920, except that the area which might be included within the metropolitan district was then limited to the territory within 10 miles of the city boundary. At this present census no such limit has been applied.

#### METROPOLITAN DISTRICTS

Ninety-six metropolitan districts have been established, each having an aggregate population of 100,000 or more, and containing one or more central cities of 50,000 or more inhabitants. No metropolitan district was established for those cities which did not have in the central city and surrounding area a population of at least 100,000.

The metropolitan districts are designated by the name of the central city, or in those cases where the area includes two or more important cities no one of which can properly be regarded as the central dominant city, by the combined names of such cities.

While the aggregate area of the metropolitan districts is only 1.2 per cent of the total land area of the United States, the population of these districts is nearly 45 per cent of the total population of the United States.

The total population and area of these 96 metropolitan districts are shown by figures presented in Table 1. It may be noted that the suburban area outside of the central cities represents almost nine-tenths of the entire area of the metropolitan districts and that the population of the outside area comprises over three-tenths of the entire population of the districts.

In most cases, as shown in Table 4, the percentage of increase of the population outside of the central city is considerably larger than that of the central city itself. The table emphasizes the well known fact that many of the large cities have a materially different rank when their suburbs are taken into account from that which they hold when only the population living within their municipal boundaries is considered. The largest metropolitan districts in order of size are—New York-Northeastern New Jersey, Chicago, Philadelphia, Los Angeles, Boston, Detroit, Pittsburgh, St. Louis, San Francisco-Oakland, and Cleveland. In this table, if an entire minor civil division had been annexed to a city since 1920, its population in 1920 was added to that of the city. No account has been taken of other changes in the political boundaries. Changes in the boundaries of townships and incorporated places between 1920 and 1930 are indicated by foot-notes in the Report of the Fifteenth Census (1930) Population Volume I.

TABLE 1.—TOTAL POPULATION AND AREA OF THE METROPOLITAN DISTRICTS: 1930

	POPULATION		AREA		Population per square mile
	Number	Per cent	Square miles	Per cent	
Total.....	54,753,645	100.0	36,577.87	100.0	1,498.9
In central cities.....	37,814,610	69.1	4,596.05	12.3	8,380.4
Outside central cities.....	16,939,035	30.9	31,981.82	87.7	528.3

The combined population in 1920 and in 1930 of the 85 metropolitan districts for which figures are available for both censuses shows an increase in population of 9,985,916, or 24.9 per cent. This increase in the metropolitan districts is especially noteworthy when compared with the population increase (16.1 per cent) for the United States. Of this increase 5,622,986 represents the growth in the central cities, and the remainder, 4,362,930, was the growth in the area outside of the central cities. But while the numerical increase in the central cities was greater than it was outside, the rate of increase outside amounted to approximately 39 per cent during the decade, whereas in the central cities it was only about 20 per cent, or approximately only half the rate of growth shown for the area outside the central cities. A reference to Table 4 shows that in over 70 per

cent of the metropolitan districts, the area outside the central city had a higher percentage of population increase than the central city itself. In short, as a rule the suburbs and neighboring smaller cities are growing more rapidly than the central cities. The figures here given do not include the 11 metropolitan districts for which it was not possible to compile comparable population figures for the two censuses, either because of changes in the boundaries of the surrounding minor civil divisions, the county having been redistricted between 1920 and 1930, or because of the fact that in several instances political subdivisions had been subdivided to follow lines of the enumeration districts used in the census of 1930, so as to permit the inclusion of the areas of heavy population for which, however, the corresponding divisions could not be made for 1920.

TABLE 1A.—TOTAL POPULATION AND INCREASE BETWEEN 1920 AND 1930 FOR THE METROPOLITAN DISTRICTS: 1930

	POPULATION		INCREASE, 1920 TO 1930	
	1930	1920	Number	Per cent
Continental United States.....	122,775,046	105,710,620	17,064,420	16.1
Metropolitan districts <sup>1</sup> .....	50,043,233	40,057,307	9,986,916	24.0
In central cities.....	34,563,274	28,040,288	6,522,986	10.4
Outside central cities.....	15,479,940	11,117,010	4,362,930	39.2
Outside metropolitan districts.....	72,731,823	65,653,313	7,078,510	10.8

<sup>1</sup> Does not include 11 metropolitan districts for which comparable figures are unavailable. These districts are: Chattanooga, Houston, Jacksonville, Los Angeles, Memphis, Miami, New Orleans, Portland, Ore., San Diego, San Jose, Tampa-St. Petersburg.

In Table 2 are shown the per cent distribution of the population of the metropolitan districts by sex, color, nativity, and age, together with the per cent that the population in each class was of the corresponding total United States population. Only 16.9 per cent of the negroes in the Southern States are included in the metropolitan districts of those States. The corresponding per cent for the Northern States is 82.9.

Thus the table shows that almost three-fourths (74.9 per cent) of the foreign-born white population of the United States is comprised in the population of the metropolitan districts as compared with about

one-third (34 per cent) of the native white population of native parentage. This reflects the fact that the heavy foreign settlements are in and around large urban centers where the manufacturing industries of the Nation are concentrated.

Over 50 per cent of the population between 25 and 44 years of age is in metropolitan districts as compared with about 39 per cent of the children under 15 years of age and of old people 65 years of age and over.

Of the Negro population 30.8 per cent is found in metropolitan districts.

TABLE 2.—SEX, COLOR, NATIVITY, AND AGE DISTRIBUTION OF THE POPULATION IN THE UNITED STATES AND IN THE METROPOLITAN DISTRICTS: 1930

Table 3 gives for each metropolitan district the ratio of males per 100 females; and the percentage of foreign-born white, of Negroes, and of children under 15 years of age.

With few exceptions females outnumber males in the central city while in the suburbs the reverse is true, females being outnumbered by males. In nearly every metropolitan district the percentage of foreign-born white in the central city was higher than outside, which condition is also true of the percentage of Negroes. With only four exceptions the percentage of children under 15 years of age in the population is higher outside than in the central city. Generalizing, we can say, therefore, that there are relatively (i. e., in proportion to population) more males, more children, and more

native white Americans in the suburbs and neighboring smaller cities than in the central cities. Doubtless we are justified in saying that there are also proportionately more homes and more family life.

In 10 districts the population under 15 years of age in the area outside the central city was 35 per cent or more of the total population. Flint and Johnstown show the highest percentage, 39.9 and 39.7 per cent, respectively. Of all the central cities, Johnstown showed the highest percentage (32.0 per cent) of children under 15 years of age. For 69 districts, the population under 15 years of age outside the central city was 28 per cent or more, whereas only 15 districts showed a corresponding per cent in the central cities.

TABLE 3.—NUMBER OF MALES PER HUNDRED FEMALES, PER CENT FOREIGN-BORN WHITE, PER CENT NEGRO, AND PER CENT UNDER 15 YEARS OF AGE IN THE POPULATION OF THE CENTRAL CITIES AND OF THE AREA OUTSIDE, FOR METROPOLITAN DISTRICTS: 1930

The population figures accompanying the map give the composition of the population by sex, race, age, and nativity for the central city, for the total area outside the central city, and also for all incorporated municipalities and all minor civil divisions within the metropolitan district. These figures reflect variations that are due to geographical location, the type of industry, and economic conditions as well as to social influence in the different localities.

Only 2,350 of the 52,118 minor civil divisions in the United States are included in the metropolitan districts, and only 1,560 of the 16,598 incorporated places. The maps, however, extend somewhat beyond the boundaries of the metropolitan districts and include in the surrounding area 5,883 minor civil divisions and 1,798 incorporated places. Detailed population figures for the areas surrounding the metropolitan districts can be found in the Report of the Fifteenth Census (1930) Population Volume III.

TABLE 4.—POPULATION, 1920 AND 1930, LAND AREA, AND DENSITY FOR METROPOLITAN DISTRICTS: 1930

[A minus sign (−) denotes decrease]

AREA	POPULATION		Per cent of increase	1930		AREA	POPULATION		Per cent of increase	1930

<sup>1</sup> Comprises that part of Valley Falls village in Pittstown town.

## **ALLENTOWN-BETHLEHEM-EASTON METROPOLITAN DISTRICT**

## Limits of District

# ALLENTOWN-BETHLEHEM-EASTON METROPOLITAN DISTRICT

Table A.—SUMMARY: POPULATION AND AREA

AREA	POPULATION			Land area in square miles, 1930	Population per square mile, 1930
	1930	1920	Per cent of increase		
	322,172	281,083	14.6		
<b>Metropolitan District</b>	<b>322,172</b>	<b>281,083</b>	<b>14.6</b>	<b>834.53</b>	<b>962.8</b>
In central cities					
Allentown city	184,923	164,013	12.7	32.13	5,765.5
Bethlehem city	92,563	76,051	21.7	11.41	8,112.4
Easton city	57,892	54,149	6.9	17.46	3,315.7
Outside central cities	137,249	117,070	17.2	302.40	10,573.0
					463.9

<sup>1</sup> Includes population (2,540) of South Allentown borough, annexed to Allentown city since 1920.

<sup>2</sup> Includes population (3,791) of Northampton Heights borough, annexed to Bethlehem city since 1920.

Table B.—POPULATION IN DETAIL, BY POLITICAL DIVISIONS: 1930

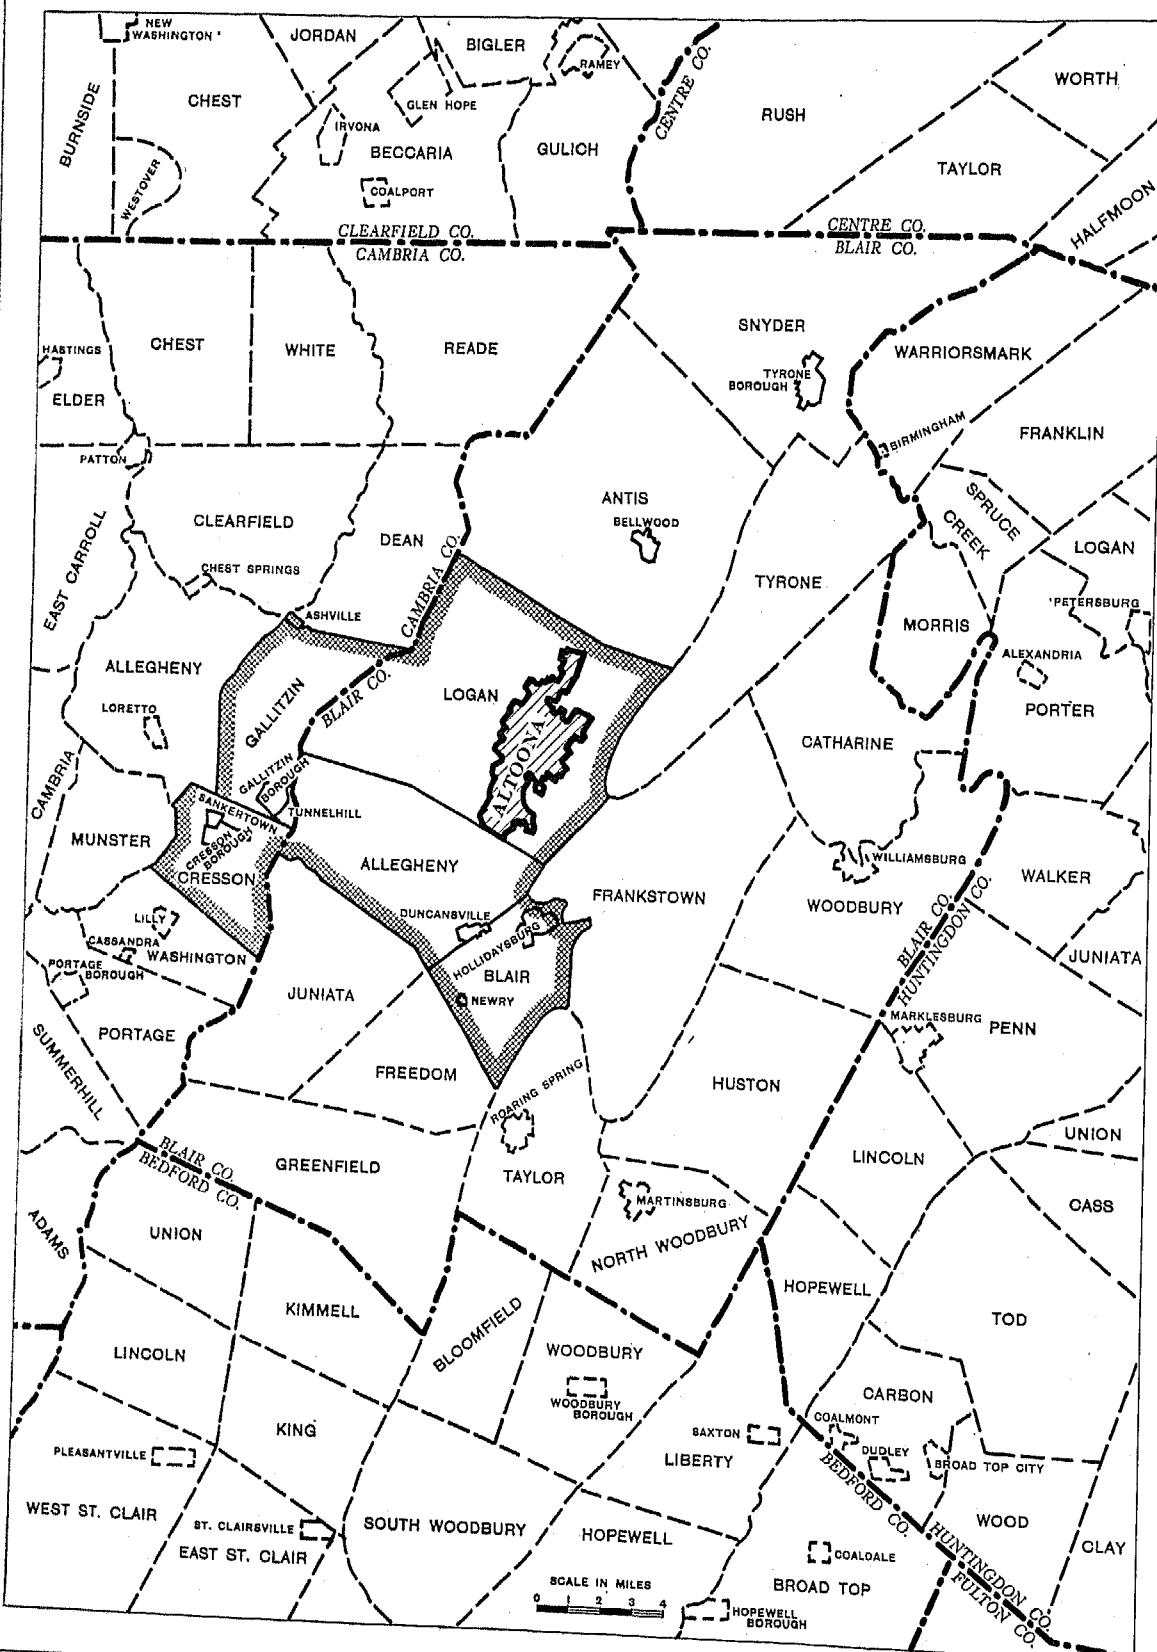

AREA	Total population	SEX		COLOR		NATIVE WHITE			For- eign- born white	AGE (YEARS)

<sup>1</sup> Comprises that part of Loveland village in Hamilton township.

## CLEVELAND METROPOLITAN DISTRICT

### Limits of District

# CLEVELAND METROPOLITAN DISTRICT

Table A.—SUMMARY: POPULATION AND AREA

AREA	POPULATION			Land area in square miles, 1930	Population per square mile, 1930
	1930	1920	Per cent of increase		
	1,194,989	935,854	27.7		
<b>Metropolitan District</b>					
Cleveland city	900,429	805,422	11.8	310.20	3,852.3
Outside city	294,560	130,432	125.8	230.44	1,275.1
					1,230.2

<sup>1</sup> Includes population (8,581) of West Park township, annexed to Cleveland since 1920.

Table B.—POPULATION IN DETAIL, BY POLITICAL DIVISIONS: 1930

AREA	Total population	SEX		COLOR		NATIVE WHITE			AGE (YEARS)								
		Male	Female	White	Negro	Total	Native parent- age	Foreign or mixed par.	For- eign- born white	Under 5	5 to 14	15 to 24	25 to 34	35 to 44	45 to 64	65 and over	21 and over (incl. unkn.)
